Mots clés : *Functional Safety, Automation Security, HART, IoT, IIoT, industry 4.0, Big Data, Digitization, safety systems*

Résumé :

Functional safety is a well-established field of application today. Technological advances, mainly from other areas, have initiated major changes in many industries. It is therefore necessary to understand if and how realization of functional safety has to evolve in the future. This presentation will explore trends in safety and security that are being imposed by both customer needs and technological advances, as well as discussing HIMA's future plans and how we will react to upcoming challenges.
